CINGO SOLUTIONS

OUR SECURITY PROCESS

1 - EVALUATION

HOW WE QUALIFY YOU

Through the evaluation, we assess your current security standard and present a Security Implementation Plan to suggest the highest security standards.

WHY WE QUALIFY YOU

At Cingo Solutions, we maintain a high standard of security compliance. It is important to us that we provide that same standard to our clients.

WHERE TO START

Knowing where to go starts with knowing where you are. We conduct an in-depth evaluation of your current security standards to gauge where to begin.

2 - IMPLEMENTATION

ALL INCLUSIVE SECURITY PACKAGES

We understand that one size doesn't fit all, however, through experience, we have developed set packages that lay an inclusive and understandable foundation to build a secure environment for your specific needs.

ADAPTABLE SECURITY MEASURES

Every I.T. infrastructure has specific needs, our Secure Products and Services will cover your unique requirements to ensure that all the bases are covered.

ON-BOARDING INTO PROPRIETARY CRM

Cingo's proprietary CRM interacts with, and reports on, every level of your secure I.T. infrastructure. Your account is on-boarded and the initial stages of Cingo's security measures are established.

VENDOR TRANSFERS

If any current vendors do not meet security standards, we can take care of any necessary vendor transfers, safely moving sensitive data into a more secure environment.

3 - MAINTENANCE

HELP DESKS

With 24/7 Incident Support over the phone, and ticket support through our CRM, we are able to manage any issue that arises and resolve it in a timely manner.

LIVE REPORTING

Cingo CRM displays live reports, showing the health of your security system, attempted threats, and our team's work on your account.

INCIDENT PREVENTION AND MANAGEMENT

In the event of an incident, our software blocks the attempt while simultaneously sounding an alert. A resolution is implemented and a report is generated to keep you updated on your businesses progress.
